PROFESSIONAL SUMMARY

Electronics and Telecommunication Engineering graduate (Graduated: 2026, CGPA: 8.33/10) with hands-on experience in software application development, unit testing, and cross-functional collaboration. Proficient in C++, Python, and JavaScript with a demonstrated ability to independently learn new programming languages and technologies based on project requirements. Passionate about software engineering with personal projects spanning mobile, web, and AI domains. Strong communicator with a self-motivated, positive attitude — eager to learn, grow, and apply problem-solving skills to real-world challenges at Google.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, Dart, SQL

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Web & Mobile: React.js, Node.js, Flutter, Android SDK, REST APIs

Databases: MySQL, PostgreSQL, SQLite, Firebase Firestore

Tools & Practices: Git, GitHub, Docker, AWS Basics, Unit Testing, Debugging, Agile, Google Workspace

EXPERIENCE

Web Developer Intern — *Blockly Technologies*

Jun 2024 – Aug 2024

- Developed and tested software application features using React.js and JavaScript; conducted unit testing and debugging to ensure high-quality, reliable deliverables aligned with project requirements.
- Integrated REST APIs to implement new features and data-driven workflows; maintained existing codebase by investigating and resolving problem areas in SQL databases.
- Collaborated with cross-functional team members using Git-based workflows; communicated progress clearly and contributed to well-structured, quality-compliant code throughout sprint cycles.

Technical Content Writer Intern — *GeeksforGeeks*

Jan 2024 – Dec 2024

- Authored technical articles on programming, DSA, and software engineering — demonstrating excellent written communication, self-motivation, and ability to learn and explain new technical concepts independently.
- Managed multiple ambiguous writing tasks simultaneously, prioritizing effectively and seeking guidance where appropriate — building strong organizational and professional communication skills.

PROJECTS

Drone & UAV Detection System | *Python, Computer Vision, Deep Learning*

- Independently learned computer vision and deep learning frameworks to build a real-time drone detection application — demonstrating ability to pick up new programming languages and technologies based on project requirements.
- Designed modular software architecture with unit-testable components, clear documentation, and structured code — applying problem-solving skills to a real-world safety challenge end-to-end.

Notes App | *Flutter, SQLite, Dart*

- Built and tested an offline-first CRUD application using Flutter and Dart — a language learned independently for this project — with persistent SQLite storage, error handling, adaptive theming, and Play Store deployment.

World Time App | *Flutter, REST API, HTTP, JSON*

- Integrated the TimezoneDB REST API with async networking, JSON parsing, and structured error handling; ensured code quality through testing and completed full production Play Store release workflow.

EDUCATION

B.E. Electronics & Telecommunication Engineering

Graduated: 2026

SSBT's College of Engineering and Technology, Jalgaon, Maharashtra | CGPA: 8.33 / 10

Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, OOP, Software Engineering, Embedded Systems

ACHIEVEMENTS & CERTIFICATIONS

Achievements: Smart India Hackathon Participant | Google Cloud Arcade – Legend Milestone Achiever | Technical Content Writer at GeeksforGeeks

Certifications: NPTEL – Programming and Problem Solving in C | Google Cloud – Introduction to Generative AI
